

How to SSH into Eden Server Workspace:

This is for future assignments where you'll be creating webpages and uploading them to Eden

1. Download and run "setup.exe" file on <https://software.rutgers.edu/product/2308>
 - a. If you have a Mac, go to this link instead: https://filezilla-project.org/download.php?show_all=1 (and select the Mac OS X one)
 - b. Keep default settings (don't change anything upon installation)
 - c. Filezilla works very similar to the Secure File Transfer Client so the directions below should be similar if not identical
2. **THIS STEP IS IF YOU DON'T HAVE AN EDEN ACCOUNT:** Activate your NETID so you can log in to Eden at <http://netid.rutgers.edu>
 - a. Go to Service Activation on the left, then check off the "Student (eden.rutgers.edu)" box
 - b. Click the "Activate Services" button
 - c. **You might have to wait a few hours for it to update**
 - d. If it doesn't update the, call the NBCS Help Desk at 732-445-HELP
3. Run the program to open up the client (search for "Secure File Transfer Client")
4. Click "Quick Connect"
 - a. Host name is "eden.rutgers.edu"
 - b. Username is your NETID
 - c. (I don't know if this is necessary, but try putting 22 for port)
5. Enter your NETID password when prompted
6. Create a new folder (the icon looks like a folder that's sparkling) under the "Remote" section and name it "public_html" (case sensitivity is important; all lower-case)
 - a. You can either look for the "New Folder" icon or simply right-click and select it
7. Right-click the folder and select "Properties"; you're going to be changing the permissions so that other people can view it
 - a. Change the "Permission mode" value to 755; this enables anyone to view/access the folder but only you can change it
8. You're done! For now at least.
9. If you have any troubles with Eden and nothing works, try calling the NBCS Help Desk at 732-445-HELP
