

## Flowcharts

Algorithms (flowcharts):

Symbol	Name	Function
	Start/end	An oval represents a start or end point.
	Arrows	A line is a connector that shows relationships between the representative shapes.
	Input/Output	A parallelogram represents input or output.
	Process	A rectangle represents a process.
	Decision	A diamond indicates a decision.

Note: Can replace the start/end with an oval shape instead (they're similar)

**Creating a flowchart of ordering Chipotle:**

- Start (wait on line/begin order)
- Order burrito/bowl (due to long process in real life can simplify to one step)
- Have raincheck coupon? If yes use it otherwise pay normally
- Receive burrito
- End process
